

## Entity Framework Common Commands:

1. To add Entity Framework to project

`Install-Package EntityFramework -Version 6.1.3`

2. To Enable Migration

`Enable-Migrations`

3. To Add a migrations

`Add-Migration MigrationNameABC`

4. To overwrite a migration

`Add-Migration [ExistingMigrationNameABC] -Force`

5. To remove an added migration(just added but not updated to database)

Go To solution explorer -> Migration (Folder) -> Delete the migrationName.cs File.

6. Update Database after you add migration

`Update-database`

7. To Seed Database

You will have to use SQL inside your migration so within your migration.cs file after you add-migration you can make change by adding SQL inside Up() Method

```
public override void Up()
{
    Sql("INSERT INTO ...")
}
```
